

ref. QMPDTV1

PCDesktop TV InfoScreen allows to use all the features of the application and still can function as the main server of q.track solution.

PCDesktop TV InfoScreen

ref. QMPDTV1

The QMPDTV1 is a mini high-performance computer that can have several features within the Q.track solution. This unit is ready to host the entire structure of q.track solution (Qcomposer, Qweb, Qinfoscreen and Database) while running the Qinfoscreen application in order to project the image of the corresponding screen template. This equipment has the advantage of supporting the voice call service as well as running TV signal in Qinfoscreen.
